# 213 nm WAVELENGTH

Clean and smooth ablation

Hydration does not affect ablation

Closer to absorption peak of corneal collagen

## PULZAR Z1 FROM CUSTOMVIS

0.6mm Gaussian

Repetition rate of 300-400 Hz

High pulse to pulse energy stability

Minimal thermal heating

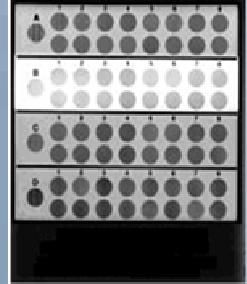

Limbus based eye tracking

Intra-operative eye tracker

Solid state crystal scan faster

# Material and Methods

Standard treatment using Pulzar Z1, LASIK-Amadues II microkeratome

Pre & 3 months after surgery-Contrast sensitivity and RMS value, HO total

Contrast sensitivity CSV-1000 testing (Vector Vision, USA )

Spatial frequencies-3, 6, 12 & 18 cycles per degree (cpd)

Contrast sensitivity numbers into log values

Aberrometry was done with iTRACE (Texas, USA )

RMS value- Higher order total

# Conclusions

213 nm wavelength Pulzar Z1, Standard

No change in contrast sensitivity

Decrease in RMS value higher order aberrations total, though statistically not significant

Results are excellent

Following LASIK and PRK with Mitomycin-C
