

27 July 2007

CustomVis Plc
("CustomVis" or the "Company")

Trading update

CustomVis (AIM : CUS), the manufacturer and seller of the world's only solid-state laser surgical device, the Pulzar Z1, for the correction of eyesight announces a trading update for the year ended 30 June 2007.

Turnover for the period is expected to be approximately £500,000, compared to sales of £89,000 in the year ended 30 June 2006.

Laser sales

In the year ended 30 June 2007, CustomVis achieved sales (ie installed at customer's site) of nine Pulzar Z1 units (all on a deposit plus monthly payment basis over a fixed term, typically two years) and at the date of this announcement has received confirmed orders (ie where the Company has received a signed contract and a deposit but awaits shipment to the customer) for three Pulzar Z1 units and orders in progress (ie where the Company has received a signed contract or a deposit) relating to a further nine Pulzar Z1 units. The Company anticipates shipping the confirmed orders over the summer and has the production capacity to ship the unconfirmed orders once deposits are received.

Accordingly, at 30 June 2007 the Company had a sold installed base of fourteen Pulzar Z1 units (of which thirteen units are still being paid for by the customers) and four units which have been installed for evaluation purposes.

On the basis that the three confirmed orders are installed over the next two months, outstanding payments due to CustomVis relating to sales to date amount to approximately £1 million due to be received in the year ending 30 June 2008 and approximately £0.7 million due to be received in the year ending 30 June 2009. The costs relating to this income are small and relate primarily to service.

Laser production

Following the placing which raised £1.34 million, net of expenses, in January 2007, the Company was able to increase production of lasers to three a month from the end of March 2007, a level it has maintained since that date.

First patents issued

The Company has had two patents issued. In the USA, one has been granted in connection with the Company's solid state scanning technology and in the UK, one has been granted to the Company for its limbal based eye tracking technology.
